(54) Title: SUBSTITUTED QUINOXALINE DERIVATIVES AS INTERLEUKIN-8 RECEPTOR ANTAGONISTS

#### (57) Abstract

Quinoxaline compounds are described as well as method for the preparation and pharmaceutical compositions of same, which are useful as interleukin-8 (IL-8) receptor antagonists and can be used in the treatment of a chemokine-mediated disease wherein the chemokine binds to an IL-8a (CXCR1) or b (CXCR2) receptor such as, a chemokine-mediated disease selected from psoriasis, or atopic dermatitis, disease associated with pathological angiogenesis (i.e. cancer), asthma, chronic obstructive pulmonary disease, adult respiratory distress syndrome, arthritis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, gastric ulcer, septic shock, endotoxic shock, gram-negative sepsis, toxic shock syndrome, stroke, cardiac and renal reperfusion injury, glomerulo-nephritis, or thrombosis, Alzheimer's disease, graft versus host reaction, or allograft rejections.

# SUBSTITUTED QUINOXALINE DERIVATIVES AS INTERLEUKIN-8 RECEPTOR ANTAGONISTS

## BACKGROUND OF THE INVENTION

The present invention relates to novel quinoxaline compounds useful as pharmaceutical agents, to methods for their production, to pharmaceutical compositions which include these compounds and a pharmaceutical carrier, and to pharmaceutical methods of treatment. The compounds of the present invention are Interleukin-8 (IL-8) receptor antagonists. More particularly, the compounds of the present invention are useful in the treatment of a chemokine-mediated disease wherein the chemokine binds to an IL-8a (CXCR1) or b (CXCR2) receptor such as, for example, a chemokine-mediated disease selected from psoriasis, or atopic dermatitis, tumor growth and angiogenesis, asthma, chronic obstructive pulmonary disease, adult respiratory distress syndrome, arthritis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, gastric ulcer, septic shock, endotoxic shock, gram-negative sepsis, toxic shock syndrome, stroke, cardiac and renal reperfusion injury, glomerulo-nephritis, or thrombosis, Alzheimer's disease, graft versus host reaction, or allograft rejections.

IL-8 is a 72 amino acid protein which is a member of the superfamily of leukocyte chemoattractant proteins which have been referred to as intercrines, C-X-C or C-C cytokines or, more recently as chemokines (Oppenheim J.J. et al., "Properties of the novel proinflammatory supergene "intercrine" cytokine family." *Annu. Rev. Immunol.*, 1991;9:617-648). Many members of the chemokine family appear to be involved in the inflammatory process and in the trafficking of leukocytes. The chemokine superfamily is composed of two branches: the α- and the β-chemokines. The α-chemokine branch includes IL-8, neutrophil activating peptide-2 (NAP-2), melanoma growth stimulatory activity (MGSA/gro or GROα), and ENA-78, all of which have attracting and activating effects predominantly on neutrophils. This branch also includes PF4, β-thromboglobulin, and CTAPIII, which do not affect neutrophils.

IL-8 was originally identified by its ability to both attract and activate polymorphonuclear leukocytes (neutrophils) and has now been shown to be rapidly induced in a wide variety of cell and tissue types in response to proinflammatory cytokines such as IL-1b or TNFa. Additionally, there is data demonstrating high systemic levels of IL-8 in certain neutrophil-mediated 5 inflammatory diseases, suggesting the IL-8 and closely related factors may be the principal endogenous mediators of neutrophil activation. Many reports have been published regarding disorders in which high levels of IL-8 have been measured. and include rheumatoid arthritis, septic shock, asthma, cystic fibrosis, myocardial infarction, and psoriasis (Baggiolini et al., FEBS Lett., 1992;307:97; Miller et al., 10 Crit. Rev. Immunol., 1992;12:17. Oppenhein et al., Annu. Rev. Immunol., 1991;9:617; Seitz et al., J. Clin. Invest., 1991;87:463; Miller et al., Am. Rev. Respir. Dis., 1992;146:427; Donnely et al., Lancet, 1993;341:643). Strong in vivo evidence indicating a central role of IL-8 in the pathology related to lung ischemia/reperfusion has recently been published (Sekido N., Mukaida N. et al., 15 "Prevention of lung reperfusion injury in rabbits by a monoclonal antibody against interleukin-8." Nature, 1993;365(6447):654-7 Issn: 0028-0836). A monoclonal antibody to rabbit IL-8, capable of blocking the in vitro neutrophil chemotactic activity of IL-8, prevented tissue damage in the rabbit lung normally resulting from lung ischemia/reperfusion. More recently, another study has shown 20 beneficial effects of an IL-8 neutralizing antibody in an endotoxin-induced pleurisy model in rabbit (Broaddus V.C., Boylan A.M. et al., "Neutralization of IL-8 inhibits neutrophil influx in a rabbit model of endotoxin-induced pleurisy," J. Immunol., 1994;152(6):2960-2967). There were also reports indicating similar beneficial effects with IL-8 neutralizing antibodies in animal models of dermatitis. 25 joint arthritis, and glomerulonephritis. Additionally, knockout mice have been generated in which the apparent mouse homologue of the IL-8R (closer to IL-8RB) was deleted by homologous recombination (Cacalano G., Lee J. et al., "Neutrophil and b cell expansion in mice that lack the murine IL-8 receptor homolog," Science, 1994;265(5172):682-4 Issn: 0036-8075). Although these mice 30 appear healthy, their neutrophils are greatly impaired, as compared to wild-type mice, in their ability to migrate to the peritoneum in response to intraperitoneal

Ι

thioglycollate injection. All of these results suggest that IL-8 is an important mediator of neutrophil migration and activity in some inflammatory settings, and that a small molecule antagonist to the receptors for IL-8 should prove to be an effective treatment for some inflammatory pathologies and has the potential to be a broadly useful anti-inflammatory agent. Also, there have been reports that IL-8 is an important cytokine involved in tumor growth and angiogenesis in a variety of malignancies (Hebert et al., *Cancer Invest.*, 1993;11:743 and Richards et al.,

We have identified a series of quinoxalines that are IL-8 receptor antagonists and which can additionally be used in psoriasis, or atopic dermatitis, disease associated with pathological angiogenesis (i.e. cancer), asthma, chronic obstructive pulmonary disease, adult respiratory distress syndrome, arthritis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, gastric ulcer, septic shock, endotoxic shock, gram-negative sepsis, toxic shock syndrome, stroke, cardiac and renal reperfusion injury, glomerulo-nephritis, or thrombosis, Alzheimer's disease, graft versus host reaction, or allograft rejections.

## SUMMARY OF THE INVENTION

Accordingly, a first aspect of the present invention is a compound of Formula I

$$A \longrightarrow_{N}^{N} \mathbb{R}^{1}$$

wherein A is selected from the group consisting of:

American Journal of Surgery, 1997;174:507).

$$R^{3}$$
wherein  $R^{3}$ ,  $R^{3}$ a, and  $R^{3}$ b are each independently the same or  $R^{3}$ b

different and are hydrogen,

stroke, cardiac and renal reperfusion injury, glomerulo-nephritis, or thrombosis, Alzheimer's disease, graft versus host reaction, or allograft rejections.

A still further embodiment of the present invention is a pharmaceutical composition for administering an effective amount of a compound of Formula I or Formula II in unit dosage form in the treatment methods mentioned above. Finally, the present invention is directed to methods for production of compounds of Formula I or Formula II.

## DETAILED DESCRIPTION OF THE INVENTION

In the compounds of Formula I or II, the term "alkyl" means a straight or branched hydrocarbon radical having from 1 to 8 carbon atoms and includes, for example, methyl, n-propyl, isopropyl, n-butyl, sec-butyl, isobutyl, tert-butyl, n-pentyl, n-hexyl, n-heptyl, n-octyl, and the like.

"Alkoxy" and "thioalkoxy" are O-alkyl or S-alkyl of from 1 to 6 carbon atoms as defined above for "alkyl".

The term "aryl" means an aromatic radical which is a phenyl group, a phenyl group substituted by 1 to 4 substituents selected from alkyl as defined above, alkoxy as defined above, thioalkoxy as defined above, hydroxy, halogen, trifluoromethyl, amino, alkylamino as defined above for alkyl, dialkylamino as

defined for alkyl, nitro, cyano, carboxy, SO<sub>3</sub>H, CHO, -C-alkyl as defined above

for alkyl, -C-NH<sub>2</sub>, -C-NH-alkyl as defined above for alkyl, -C-N(alkyl)<sub>2</sub> as defined above for alkyl, -(CH<sub>2</sub>)<sub>n</sub>-NH<sub>2</sub> wherein n is an integer of 1 to 5, -(CH<sub>2</sub>)<sub>n</sub>-NH-alkyl as defined above for alkyl and n, -(CH<sub>2</sub>)<sub>n</sub>-N(alkyl)<sub>2</sub> as defined above for alkyl and n.

The term "aralkyl" or "arylalkyl" means an aromatic radical attached to an alkyl radical wherein "aryl" and "alkyl" are as defined above, for example, benzyl, fluorenylmethyl, and the like.

10

15

20

25

30

The term "5- to 7-membered ring optionally containing an oxygen atom or N-R<sup>4</sup>" includes, for example, pyrrolidine, pyrrazolidine, imidazolidine, oxazolidine, piperidine, piperazine, morpholine, homopiperidine, and the like. The carbon atoms of the above 5- to 7-membered ring may be substituted independently by alkyl, amino, aminoalkyl, monoalkylaminoalkyl, dialkylaminoalkyl, carboxy, carboxyalkyl, alkylcarboxyalkyl, thio, thioalkyl, alkylthioalkyl, hydroxy, hydroxyalkyl, alkoxy, or alkoxyalkyl.

"Halogen" is fluorine, chlorine, bromine, or iodine.

Some of the compounds of Formula I or II are capable of further forming both pharmaceutically acceptable acid addition and/or base salts. All of these forms are within the scope of the present invention.

Pharmaceutically acceptable acid addition salts of the compounds of Formula I or II include salts derived from nontoxic inorganic acids such as hydrochloric, nitric, phosphoric, sulfuric, hydrobromic, hydriodic, hydrofluoric, phosphorous, and the like, as well as the salts derived from nontoxic organic acids, such as aliphatic mono- and dicarboxylic acids, phenyl-substituted alkanoic acids, hydroxy alkanoic acids, alkanedioic acids, aromatic acids, aliphatic and aromatic sulfonic acids, etc. Such salts thus include sulfate, pyrosulfate, bisulfate, sulfite, bisulfite, nitrate, phosphate, monohydrogenphosphate, dihydrogenphosphate, metaphosphate, pyrophosphate, chloride, bromide, iodide, acetate, trifluoroacetate, propionate, caprylate, isobutyrate, oxalate, malonate, succinate, suberate, sebacate, fumarate, maleate, mandelate, benzoate, chlorobenzoate, methylbenzoate, dinitrobenzoate, phthalate, benzenesulfonate, toluenesulfonate, phenylacetate, citrate, lactate, maleate, tartrate, methanesulfonate, and the like. Also contemplated are salts of amino acids such as arginate and the like and gluconate, galacturonate (see, for example, Berge S.M. et al, "Pharmaceutical Salts," J. of Pharma Sci., 1977;66:1).

The acid addition salts of said basic compounds are prepared by contacting the free base form with a sufficient amount of the desired acid to produce the salt in the conventional manner. The free base form may be regenerated by contacting the salt form with a base and isolating the free base in the conventional manner. The free base forms differ from their respective salt forms somewhat in certain

10

15

20

25

30

physical properties such as solubility in polar solvents, but otherwise the salts are equivalent to their respective free base for purposes of the present invention.

Pharmaceutically acceptable base addition salts are formed with metals or amines, such as alkali and alkaline earth metals or organic amines. Examples of metals used as cations are sodium, potassium, magnesium, calcium, and the like. Examples of suitable amines are N,N'-dibenzylethylenediamine, chloroprocaine, choline, diethanolamine, dicyclohexylamine, ethylenediamine, N-methylglucamine, and procaine (see, for example, Berge S.M. et al., "Pharmaceutical Salts," *J. of Pharma Sci.*, 1977;66:1).

The base addition salts of said acidic compounds are prepared by contacting the free acid form with a sufficient amount of the desired base to produce the salt in the conventional manner. The free acid form may be regenerated by contacting the salt form with an acid and isolating the free acid in the conventional manner. The free acid forms differ from their respective salt forms somewhat in certain physical properties such as solubility in polar solvents, but otherwise the salts are equivalent to their respective free acid for purposes of the present invention.

Certain of the compounds of the present invention can exist in unsolvated forms as well as solvated forms, including hydrated forms. In general, the solvated forms, including hydrated forms, are equivalent to unsolvated forms and are intended to be encompassed within the scope of the present invention.

Certain of the compounds of the present invention possess one or more chiral centers and each center may exist in the R(D) or S(L) configuration. The present invention includes all diastereomeric, enantiomeric, and epimeric forms as well as the appropriate mixtures thereof. Additionally, the compounds of the present invention may exist as geometric isomers. The present invention includes all cis, trans, syn, anti, entgegen (E), and zusammen (Z) isomers as well as the appropriate mixtures thereof.

A preferred compound of Formula I in the first aspect of the present invention is one wherein A is selected from the group consisting of:

$$R^{3a}$$
 wherein  $R^{3}$ ,  $R^{3a}$ , and  $R^{3b}$  are each independently the same or  $R^{3b}$ 

different and are hydrogen,

Particularly valuable in the second aspect of the present invention is a compound selected from the group consisting of:

N'-[6-Chloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-diethyl-

1,2-ethanediamine;

N'-[7-Chloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-diethyl-

1,2-ethanediamine;

N'-[6,7-Dichloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-diethyl-

1,2-ethanediamine;

6,7-Dichloro-3-(2-pyridinyl)-N-[3-(1-pyrrolidinyl)propyl]-

2-quinoxalinamine;

6-Chloro-3-(2-pyridinyl)-N-[2-(1-pyrrolidinyl)ethyl]-2-quinoxalinamine;

7-Chloro-3-(2-pyridinyl)-N-[2-(1-pyrrolidinyl)ethyl]-2-quinoxalinamine;

N'-[6,7-Dimethyl-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-diethyl-

1,2-ethanediamine;

6-Chloro-3-(2-pyridinyl)-N-[3-(1-pyrrolidinyl)propyl]-2-quinoxalinamine;

7-Chloro-3-(2-pyridinyl)-N-[3-(1-pyrrolidinyl)propyl]-2-quinoxalinamine; N'-[6,7-Dimethyl-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-dimethyl-1,3-propanediamine; N'-[6-Chloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-dimethyl-1.3-propanediamine; 5 N'-[7-Chloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-dimethyl-1.3-propanediamine; 6-Chloro-N-[4-(dimethylamino)cyclohexyl]-3-(2-pyridinyl)-2-quinoxalinamine; 7-Chloro-N-[4-(dimethylamino)cyclohexyl]-3-(2-pyridinyl)-10 2-quinoxalinamine; 2,6,7-Trimethyl-3-piperazin-1-yl-quinoxaline; N.N-Dimethyl-N'-(3-methyl-quinoxalin-2-yl)-propane-1,3-diamine; 2-Methyl-3-(4-methyl-piperazin-1-yl)-quinoxaline; 2-Ethyl-3-piperazin-1-yl-quinoxaline; 15 6,7-Dichloro-2-methyl-3-piperazin-1-yl-quinoxaline; 2-Phenyl-3-piperidin-1-yl-quinoxaline; Benzyl-(3-phenyl-quinoxalin-2-yl)-amine; Phenyl-(3-phenyl-quinoxalin-2-yl)-amine; Methyl-(3-phenyl-quinoxalin-2-yl)-amine; 20 3-Phenyl-quinoxalin-2-ylamine; 2-Methyl-3-piperazin-1-yl-quinoxaline; 2-Methyl-3-piperidino-quinoxaline; 5-[4-(3-Methyl-quinoxalin-2-yl)-piperazin-1-yl]-pentan-1-ol; 25 N.N-Dimethyl-N'-(3-methyl-quinoxalin-2-yl)-ethane-1,2-diamine; N.N-Diethyl-N'-(3-methyl-quinoxalin-2-yl)-ethane-1,2-diamine; (3-Methyl-quinoxalin-2-yl)-(3-morpholin-4-yl-propyl)-amine; N,N-Dimethyl-N'-(3-phenyl-quinoxalin-2-yl)-propane-1,3-diamine; 3-Phenyl-quinoxalin-2-ylamine; 2-Methyl-3-pyrrolidin-1-yl-quinoxaline; 30 N-(1-Azabicyclo[2.2.2]octan-3-yl)-3-(2-pyridinyl)-2-quinoxalinamine; N-[3-(1H-Imidazol-1-yl)propyl]-3-(2-pyridinyl)-2-quinoxalinamine;

10

15

20

N-[2-(1-Methyl-2-pyrrolidinyl)ethyl]-3-(2-pyridinyl)-2-quinoxalinamine;

1-[3-[[3-Pyridinyl)-2-quinoxalinamine]amino]propyl]-2-pyrrolidinone;

N-[4-(4-Morpholinyl)phenyl]-3-(2-pyridinyl)-2-quinoxalinamine;

N-(4-Piperidinylmethyl)-3-(2-pyridinyl)-2-quinoxalinamine;

N-[4-(Dimethylamino)phenyl]-3-(2-pyridinyl)-2-quinoxalinamine; and

N-Methyl-N-[4-[[3-(2-pyridinyl)-2-quinoxalinyl]amino]phenyl]
acetamide; or a pharmaceutically acceptable salt thereof.

The compounds of Formula I and II are valuable receptor antagonists of IL-8.

The IL-8 chemokine inhibitory effects of compounds of the present invention were determined by the following procedures:

## Chemotaxis Assay

Compounds of Formula I and II were evaluated for their effect on chemotaxis using methodology known in the art, e.g., Carr M.W., Roth S.J., Luther E., Rose S.S., and Springer T.A., "Monocyte chemoattractant protein 1 acts as a T-lymphocyte chemoattractant." *Proc. Natl. Acad. Sci. USA*, 1994;91:3652; Qin S., Larosa G., Campbell J.J. et al., "Expression of MCP-1 and IL-8 receptors on subset on T-cells, and correlation with transendothelial chemotactic potential," *Eur. J. Immu.*, 1996;26:640.

Briefly, freshly isolated human neutrophils were resuspended in

chemotaxis buffer, which is made of one part of RPMI 1640 medium, one part of Medium 199, and 0.5% BSA. The cells were incubated with or without compounds for 5 minutes. Similarly, rhIL-8 was incubated in a separate plate, then transferred into lower chambers of chemotaxis plate. Neutrophils were added onto the top chamber. The plates were incubated at 37°C for 30 minutes. The top chamber was then removed and the plate frozen at -80°C for 30 minutes. After

thawing, migrated cells were stained with Cytoquant Cell Proliferation Assay Kit (Molecular Probes No. C-7026) and quantitated by reading the plate on a fluorescent plate reader.

10

15

20

25

## Calcium Flux Assay

Compounds of Formula I and II were evaluated for their effect on calcium flux using methodology known in the art, e.g., Neote K., DiGregorio D., Mak J.Y., Horuk R., and Schall T.J., "Molecular cloning, functional expression, and signaling characteristics of a C-C chemokine receptor," *Cell*, 1993;72:415.

Briefly, human neutrophils were incubated with the fluorescence dye FLUO-3 for 1 hour. The cells were washed after this loading period, resuspended in HANKs buffer, and loaded into a 96-well plate. Compound was added to each well. After a 2-minute incubation period, the cells were stimulated with human IL-8 and the calcium flux response recorded and quantified.

The data in Table 1 shows the effect of a representative compound of the present invention on chemotaxis and calcium flux.

	TABLE 1	
Example	IL-8 Chemotaxis	IL-8 Ca <sup>+2</sup> Flux
	$(IC_{50} = \mu M)$	% Inhibition (µM)
1	0.89	34% @ 11

The compounds of Formula I and II may be obtained by applying synthetic methodology known in the art, such as, for example, Werbel L. et al., *J. Med. Chem.*, 1968;11:630; Moderhack D., et al., *Chem. Ber.*, 1994:1633; Loriga M, et al., *Farmaco*, 1995;50(5):289; *Chin. Chem. Lett.*, 1990;1(3):25; Shepard T. and Smith D.M., *J. Chem. Soc.*, Perkin Trans I, 1987;3(501):11.

The compounds of the present invention can be prepared and administered in a wide variety of oral and parenteral dosage forms. Thus, the compounds of the present invention can be administered by injection, that is, intravenously, intramuscularly, intracutaneously, subcutaneously, intraduodenally, or intraperitoneally. Also, the compounds of the present invention can be administered by inhalation, for example, intranasally. Additionally, the compounds of the present invention can be administered transdermally. It will be obvious to those skilled in the art that the following dosage forms may comprise as the active component, either a compound of Formula I or II or a corresponding pharmaceutically acceptable salt of a compound of Formula I or II.

10

15

20

25

30

For preparing pharmaceutical compositions from the compounds of the present invention, pharmaceutically acceptable carriers can be either solid or liquid. Solid form preparations include powders, tablets, pills, capsules, cachets, suppositories, and dispersible granules. A solid carrier can be one or more substances which may also act as diluents, flavoring agents, solubilizers, lubricants, suspending agents, binders, preservatives, tablet disintegrating agents, or an encapsulating material.

In powders, the carrier is a finely divided solid which is in a mixture with the finely divided active component.

In tablets, the active component is mixed with the carrier having the necessary binding properties in suitable proportions and compacted in the shape and size desired.

The powders and tablets preferably contain from five or ten to about seventy percent of the active compound. Suitable carriers are magnesium carbonate, magnesium stearate, talc, sugar, lactose, pectin, dextrin, starch, gelatin, tragacanth, methylcellulose, sodium carboxymethylcellulose, a low melting wax, cocoa butter, and the like. The term "preparation" is intended to include the formulation of the active compound with encapsulating material as a carrier providing a capsule in which the active component, with or without other carriers, is surrounded by a carrier, which is thus in association with it. Similarly, cachets and lozenges are included. Tablets, powders, capsules, pills, cachets, and lozenges can be used as solid dosage forms suitable for oral administration.

For preparing suppositories, a low melting wax, such as a mixture of fatty acid glycerides or cocoa butter, is first melted and the active component is dispersed homogeneously therein, as by stirring. The molten homogeneous mixture is then poured into convenient sized molds, allowed to cool, and thereby to solidify.

Liquid form preparations include solutions, suspensions, and emulsions, for example, water or water propylene glycol solutions. For parenteral injection, liquid preparations can be formulated in solution in aqueous polyethylene glycol solution.

Aqueous solutions suitable for oral use can be prepared by dissolving the active component in water and adding suitable colorants, flavors, stabilizing, and thickening agents as desired.

Aqueous suspensions suitable for oral use can be made by dispersing the finely divided active component in water with viscous material, such as natural or synthetic gums, resins, methylcellulose, sodium carboxymethylcellulose, and other well-known suspending agents.

Also included are solid form preparations which are intended to be converted, shortly before use, to liquid form preparations for oral administration. Such liquid forms include solutions, suspensions, and emulsions. These preparations may contain, in addition to the active component, colorants, flavors, stabilizers, buffers, artificial and natural sweeteners, dispersants, thickeners, solubilizing agents, and the like.

The pharmaceutical preparation is preferably in unit dosage form. In such form, the preparation is subdivided into unit doses containing appropriate quantities of the active component. The unit dosage form can be a packaged preparation, the package containing discrete quantities of preparation, such as packeted tablets, capsules, and powders in vials or ampoules. Also, the unit dosage form can be a capsule, tablet, cachet, or lozenge itself, or it can be the appropriate number of any of these in packaged form.

The quantity of active component in a unit dose preparation may be varied or adjusted from 1 mg to 1000 mg, preferably 10 mg to 100 mg according to the particular application and the potency of the active component. The composition can, if desired, also contain other compatible therapeutic agents.

In therapeutic use as agents for the treatment of psoriasis, or atopic dermatitis, disease associated with pathological angiogenesis (i.e. cancer), asthma, chronic obstructive pulmonary disease, adult respiratory distress syndrome, arthritis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, gastric ulcer, septic shock, endotoxic shock, gram-negative sepsis, toxic shock syndrome, stroke, cardiac and renal reperfusion injury, glomerulo-nephritis, or thrombosis, Alzheimer's disease, graft versus host reaction, or allograft rejections, the compounds utilized in the pharmaceutical method of this invention can be administered at the initial dosage of about 1 mg to about 100 mg per kilogram

20

5

10

15

30

10

15

daily. A daily dose range of about 25 mg to about 75 mg per kilogram is preferred. The dosages, however, may be varied depending upon the requirements of the patient, the severity of the condition being treated, and the compound being employed. Determination of the proper dosage for a particular situation is within the skill of the art. Generally, treatment is initiated with smaller dosages which are less than the optimum dose of the compound. Thereafter, the dosage is increased by small increments until the optimum effect under the circumstance is reached. For convenience, the total daily dosage may be divided and administered in portions during the day if desired.

The following nonlimiting examples illustrate the inventors' preferred methods for preparing the compounds of the invention.

#### EXAMPLE 1

6-Chloro-N-[4-(dimethylamino)cyclohexyl]-3-(2-pyridinyl)-2-quinoxalinamine and 7-Chloro-N-[4-(dimethylamino)cyclohexyl]-3-(2-pyridinyl)-2-quinoxalinamine, dihydrochloride, hydrate; mp 151-153°C.

#### EXAMPLE 2

N-(1-Azabicyclo[2.2.2]octan-3-yl)-3-(2-pyridinyl)-2-quinoxalinamine; mp 63-65°C.

## **EXAMPLE 3**

20 N-[3-(1H-Imidazol-1-yl)propyl]-3-(2-pyridinyl)-2-quinoxalinamine; mp 85-86°C.

#### **EXAMPLE 4**

N-[2-(1-Methyl-2-pyrrolidinyl)ethyl]-3-(2-pyridinyl)-2-quinoxalinamine; mp 186-188°C.

#### EXAMPLE 5

25 <u>1-[3-[[3-Pyridinyl]-2-quinoxalinamine]amino]propyl]-2-pyrrolidinone</u>; pale amber viscous liquid.

**-**45-

## **EXAMPLE 6**

N-[4-(4-Morpholinyl)phenyl]-3-(2-pyridinyl)-2-quinoxalinamine; mp 205-206°C.

## **EXAMPLE 7**

N-(4-Pyridinylmethyl)-3-(2-pyridinyl)-2-quinoxalinamine; mp 142-144°C.

5

10

## **EXAMPLE 8**

N-[4-(Dimethylamino)phenyl]-3-(2-pyridinyl)-2-quinoxalinamine; mp 169-170°C.

## **EXAMPLE 9**

N-Methyl-N-[4-[[3-(2-pyridinyl)-2-quinoxalinyl]amino]phenyl]-acetamide; mp 165-166°C.

alkyl, acetyl, or

R<sup>5</sup> and R<sup>6</sup> are taken together to form a 5- to 7-membered ring optionally containing an oxygen atom or N-R<sup>4</sup> wherein R<sup>4</sup> is as defined above and m is an integer of 2 to 5,

are each independently the same or different and are hydrogen,

alkyl,

aryl,

aralkyl,

acetyl, or

-(CH2) $_m$ -N-R  $^5$  wherein R  $^5$  and R  $^6$  are as defined  ${\mbox{|}}{\mbox{|}}$  R  $^6$ 

above or R<sup>7</sup> and R<sup>8</sup> taken together to form a 5- to 7-membered ring optionally containing an oxygen atom or N-R<sup>4</sup> wherein R<sup>4</sup> and m are as defined above,

-(CH<sub>2</sub>)<sub>n</sub>-CON-R<sup>7</sup> wherein R<sup>7</sup>, R<sup>8</sup>, and n are as defined above, |<sub>P8</sub>

-(CH<sub>2</sub>)<sub>n</sub>-SO<sub>2</sub>N-R<sup>7</sup> wherein R<sup>7</sup>, R<sup>8</sup>, and n are as defined above,  $| \\ R^8$ 

 $-(CH_2)_n$ -SO<sub>2</sub>OR<sup>4</sup> wherein R<sup>4</sup> and n are as defined above,

-(CH<sub>2</sub>)<sub>n</sub>-CO<sub>2</sub> $\mathbb{R}^4$  wherein  $\mathbb{R}^4$  and n are as defined above,

-CH<sub>2</sub>OR<sup>4</sup> wherein R<sup>4</sup> is as defined above,

halogen,

CF<sub>3</sub>,

5

10

15

20

25

CBr<sub>3</sub>,

CCl<sub>3</sub>, or

NO<sub>2</sub>;

wherein R<sup>3</sup> is as defined above; and

5  $R^2$  is  $CF_3$ ,

10

15

20

CCl<sub>3</sub>,

CBr3, or

-N-R  $^{10}$  wherein R  $^{10}$  is hydrogen and  $^{1}$  R  $^{11}$ 

 $R^{11}$  is -(CH<sub>2</sub>)<sub>n</sub>-N-R<sup>5</sup> wherein n, R<sup>5</sup>, and R<sup>6</sup> are as defined | R<sup>6</sup>

above, or 
$$-(CH_2)_{\overline{n}}$$
  $N-R^5$  wherein n,  $R^5$ ,

and R<sup>6</sup> are as defined above.

# 5. The compound of Claim 4 wherein

A is 
$$R^{3a}$$
 wherein  $R^3$ ,  $R^{3a}$ , and  $R^{3b}$  are each independently

the same or different and are hydrogen,

alkyl,

-OR<sup>4</sup> wherein R<sup>4</sup> is hydrogen,

alkyl,

aryl,

aralkyl,

-60- . acetyl, or -(CH<sub>2</sub>)<sub>m</sub>-N-R<sup>5</sup> wherein R<sup>5</sup> and R<sup>6</sup> are each the same Rб 5 or different and are hydrogen. alkyl, acetyl, or  ${\it R}^{\it 5}$  and  ${\it R}^{\it 6}$  are taken together to form a 5- to 7-membered ring optionally containing an oxygen atom or N-R<sup>4</sup> wherein R<sup>4</sup> is as defined above and m is an integer of 2 to 5, 10 --(CH<sub>2</sub>)<sub>n</sub>-N-R<sup>7</sup> wherein n is zero or an integer of 1 and R<sup>7</sup> and R<sup>8</sup> R8 are each independently the same or different and are 15 hydrogen, alkyl, aryl, aralkyl, acetyl, or -(CH<sub>2</sub>) $_m$ -N-R<sup>5</sup> wherein R<sup>5</sup> and R<sup>6</sup> are as defined 20 **R**6 above or R<sup>7</sup> and R<sup>8</sup> taken together to form a 5- to 7-membered ring optionally containing an oxygen atom or N-R4 wherein R4 and m 25 are as defined above, -(CH<sub>2</sub>)<sub>n</sub>-CON-R<sup>7</sup> wherein R<sup>7</sup>, R<sup>8</sup>, and n are as defined R8 30 above, -(CH<sub>2</sub>)<sub>n</sub>-SO<sub>2</sub>N-R<sup>7</sup> wherein R<sup>7</sup>, R<sup>8</sup>, and n are as defined

**R**8

15

20

25

above,

-(CH<sub>2</sub>)<sub>n</sub>-SO<sub>2</sub>OR<sup>4</sup> wherein R<sup>4</sup> and n are as defined above,

-(CH<sub>2</sub>)<sub>n</sub>-CO<sub>2</sub>R<sup>4</sup> wherein R<sup>4</sup> and n are as defined above,

-CH2OR4 wherein R4 is as defined above,

halogen,

CF3,

CBr<sub>3</sub>,

CCl<sub>3</sub>, or

NO2;

wherein  $R^3$  is as defined above; and

 $R^2$  is -N-R  $^{10}$  wherein  $R^{10}$  is hydrogen and  ${ \mid \atop R^{11}}$ 

 $R^{11}$  is -(CH<sub>2</sub>)<sub>n</sub>-N-R<sup>5</sup> wherein n, R<sup>5</sup>, and R<sup>6</sup> are as defined above, | R<sup>6</sup>

or 
$$-(CH_2)_n$$
  $N-R^5$  wherein n,  $R^5$ , and  $R^6$  are as

defined above.

6. A compound which is selected from the group consisting of:

N-(1-azabicyclo[2.2.2]octan-3-yl)-3-(2-pyridinyl)-2-quinoxalinamine;

N-[3-(1H-imidazol-1-yl)propyl]-3-(2-pyridinyl)-2-quinoxalinamine;

N-[2-(1-methyl-2-pyrrolidinyl)ethyl]-3-(2-pyridinyl)-2-quinoxalinamine;

1-[3-[[3-pyridinyl)-2-quinoxalinamine]amino]propyl]-2-pyrrolidinone;

N-[4-(4-morpholinyl)phenyl]-3-(2-pyridinyl)-2-quinoxalinamine;

N-(4-piperidinylmethyl)-3-(2-pyridinyl)-2-quinoxalinamine;

N-[4-(dimethylamino)phenyl]-3-(2-pyridinyl)-2-quinoxalinamine; and

N-methyl-N-[4-[[3-(2-pyridinyl)-2-quinoxalinyl]amino]phenyl]-acetamide.

7. A method of treating a chemokine-mediated disease state, wherein the chemokine binds to an IL-8a (CXCR1) or b (CXCR2) receptor in a mammal, which comprises administering to said mammal an effective amount of a compound of Formula II

$$A \qquad \qquad \mathbb{I}$$

$$R^{2a}$$

wherein A is selected from the group consisting of:

$$R^{3a}$$
 wherein  $R^{3}$ ,  $R^{3a}$ , and  $R^{3b}$  are each independently the

same or different and are hydrogen,

alkyl,

-OR<sup>4</sup> wherein R<sup>4</sup> is hydrogen,

alkyl,

aryl,

aralkyl,

acetyl, or

-(CH<sub>2</sub>)<sub>m</sub>-N-R<sup>5</sup> wherein R<sup>5</sup> and R<sup>6</sup> are each the same | R<sup>6</sup>

or different and are hydrogen,

alkyl, acetyl, or

R<sup>5</sup> and R<sup>6</sup> are taken together to form a 5- to 7-membered ring optionally containing an oxygen atom or N-R<sup>4</sup> wherein R<sup>4</sup> is as defined above and m is an integer of 2 to 5,

15

10

5

20

```
-(CH<sub>2</sub>)<sub>n</sub>-N-R<sup>7</sup> wherein n is zero or an integer of 1 and R<sup>7</sup> and R<sup>8</sup>

 $R^{11}$  is -(CH2)n-N-R5 wherein n, R5, and R6 are as defined  $$\mid$$  R6

above, or  $-(CH_2)_n$   $N-R^5$  wherein n,  $R^5$ ,

and R<sup>6</sup> are as defined above.

## 11. The compound of Claim 10 wherein

A is  $R^{3a}$  wherein  $R^{3}$ ,  $R^{3a}$ , and  $R^{3b}$  are each independently

the same or different and are hydrogen,

alkyl,

-OR4 wherein R4 is hydrogen,

alkyl,

aryl,

aralkyl,

acetyl, or

-(CH<sub>2</sub>)<sub>m</sub>-N-R<sup>5</sup> wherein R<sup>5</sup> and R<sup>6</sup> are each the same  $\begin{matrix} I \\ R^6 \end{matrix}$ 

or different and are hydrogen,
alkyl, acetyl, or  $R^5 \text{ and } R^6 \text{ are taken together to form a 5- to}$  7-membered ring optionally containing an  $oxygen \text{ atom or N-R}^4 \text{ wherein } R^4 \text{ is as}$  defined above and m is an integer of 2 to 5,  $-(CH_2)_n\text{-N-R}^7 \text{ wherein n is zero or an integer of 1 and R}^7 \text{ and R}^8$   $R^8$  are each independently the same or different and are hydrogen, alkyl,

aryl,

aralkyl,

acetyl, or

-(CH<sub>2</sub>)<sub>m</sub>-N-R<sup>5</sup> wherein R<sup>5</sup> and R<sup>6</sup> are as defined  $\mid$  R<sup>6</sup>

above or R<sup>7</sup> and R<sup>8</sup> taken together to form a 5- to 7-membered ring optionally containing an oxygen atom or N-R<sup>4</sup> wherein R<sup>4</sup> and m are as defined above,

-(CH<sub>2</sub>)<sub>n</sub>-CON-R<sup>7</sup> wherein R<sup>7</sup>, R<sup>8</sup>, and n are as defined | R<sup>8</sup>

above,

-(CH<sub>2</sub>)<sub>n</sub>-SO<sub>2</sub>N-R<sup>7</sup> wherein R<sup>7</sup>, R<sup>8</sup>, and n are as defined |<sub>R</sub>8

above,

- $(CH_2)_n$ - $SO_2OR^4$  wherein  $R^4$  and n are as defined above, - $(CH_2)_n$ - $CO_2R^4$  wherein  $R^4$  and n are as defined above,

5

10

15

20

25

30

10

15

20

-CH<sub>2</sub>OR<sup>4</sup> wherein R<sup>4</sup> is as defined above,

halogen,

CF<sub>3</sub>,

CBr<sub>3</sub>,

CCl<sub>3</sub>, or

NO<sub>2</sub>;

wherein  $R^3$  is as defined above; and

$$R^{2a}$$
 is N-R  $^{10}$  wherein  $R^{10}$  is hydrogen and  $\begin{matrix} & & \\$ 

 $R^{11}$  is -(CH<sub>2</sub>)<sub>n</sub>-N-R<sup>5</sup> wherein n, R<sup>5</sup>, and R<sup>6</sup> are as defined  $R^6$ 

above, or 
$$-(CH_2)_n$$
  $N-R^5$  wherein n,  $R^5$ ,

and R<sup>6</sup> are as defined above.

12. The method according to Claim 7 wherein the mammal is affected with a chemokine-mediated disease selected from the group consisting of psoriasis, or atopic dermatitis, disease associated with pathological angiogenesis (i.e. cancer), asthma, chronic obstructive pulmonary disease, adult respiratory distress syndrome, arthritis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, gastric ulcer, septic shock, endotoxic shock, gram-negative sepsis, toxic shock syndrome, stroke, cardiac and renal reperfusion injury, glomerulo-nephritis, or thrombosis, Alzheimer's disease, graft versus host reaction, or allograft rejections.

The method according to Claim 7 wherein the compound or a 13. pharmaceutically acceptable salt thereof is selected from group consisting of: N'-[6-Chloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-diethyl-5 1,2-ethanediamine; N'-[7-Chloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-diethyl-1.2-ethanediamine; N'-[6,7-Dichloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-diethyl-1,2-ethanediamine; 6,7-Dichloro-3-(2-pyridinyl)-N-[3-(1-pyrrolidinyl)propyl]-10 2-quinoxalinamine; 6-Chloro-3-(2-pyridinyl)-N-[2-(1-pyrrolidinyl)ethyl]-2-quinoxalinamine; 7-Chloro-3-(2-pyridinyl)-N-[2-(1-pyrrolidinyl)ethyl]-2-quinoxalinamine; 15 N'-[6,7-Dimethyl-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-diethyl-1,2-ethanediamine; 6-Chloro-3-(2-pyridinyl)-N-[3-(1-pyrrolidinyl)propyl]-2-quinoxalinamine; 7-Chloro-3-(2-pyridinyl)-N-[3-(1-pyrrolidinyl)propyl]-20 2-quinoxalinamine; N'-[6,7-Dimethyl-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-dimethyl-1,3-propanediamine; N'-[6-Chloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-dimethyl-25 1,3-propanediamine; N'-[7-Chloro-3-(2-pyridinyl)-2-quinoxalinyl]-N,N-dimethyl-1,3-propanediamine; 6-Chloro-N-[4-(dimethylamino)cyclohexyl]-3-(2-pyridinyl)-2-quinoxalinamine; 30 7-Chloro-N-[4-(dimethylamino)cyclohexyl]-3-(2-pyridinyl)-2-quinoxalinamine; 2,6,7-Trimethyl-3-piperazin-1-yl-quinoxaline;

and

N.N-Dimethyl-N'-(3-methyl-quinoxalin-2-yl)-propane-1,3-diamine; 2-Methyl-3-(4-methyl-piperazin-1-yl)-quinoxaline; 2-Ethyl-3-piperazin-1-yl-quinoxaline; 5 6,7-Dichloro-2-methyl-3-piperazin-1-yl-quinoxaline; 2-Phenyl-3-piperidin-1-yl-quinoxaline; Benzyl-(3-phenyl-quinoxalin-2-yl)-amine; Phenyl-(3-phenyl-quinoxalin-2-yl)-amine; Methyl-(3-phenyl-quinoxalin-2-yl)-amine; 3-Phenyl-quinoxalin-2-ylamine; 10 2-Methyl-3-piperazin-1-yl-quinoxaline; 2-Methyl-3-piperidino-quinoxaline; 5-[4-(3-Methyl-quinoxalin-2-yl)-piperazin-1-yl]-pentan-1-ol; N,N-Dimethyl-N'-(3-methyl-quinoxalin-2-yl)-ethane-1,2-diamine; N.N-Diethyl-N'-(3-methyl-quinoxalin-2-yl)-ethane-1,2-diamine; 15 (3-Methyl-quinoxalin-2-yl)-(3-morpholin-4-yl-propyl)-amine; N,N-Dimethyl-N'-(3-phenyl-quinoxalin-2-yl)-propane-1,3diamine; 3-Phenyl-quinoxalin-2-ylamine; 2-Methyl-3-pyrrolidin-1-yl-quinoxaline; 20 N-(1-Azabicyclo[2.2.2]octan-3-yl)-3-(2-pyridinyl)-2quinoxalinamine; N-[3-(1H-Imidazol-1-yl)propyl]-3-(2-pyridinyl)-2quinoxalinamine; 25 N-[2-(1-Methyl-2-pyrrolidinyl)ethyl]-3-(2-pyridinyl)-2quinoxalinamine; 1-[3-[[3-Pyridinyl]-2-quinoxalinamine]amino]propyl]-2pyrrolidinone; N-[4-(4-Morpholinyl)phenyl]-3-(2-pyridinyl)-2-quinoxalinamine; 30 N-(4-Piperidinylmethyl)-3-(2-pyridinyl)-2-quinoxalinamine;

N-[4-(Dimethylamino)phenyl]-3-(2-pyridinyl)-2-quinoxalinamine;

10

15

20

N-Methyl-N-[4-[[3-(2-pyridinyl)-2-quinoxalinyl]amino]phenyl]-acetamide.

- 14. A pharmaceutical composition comprising a compound according to Claim 1 in admixture with a pharmaceutically acceptable excipient, diluent, or carrier.
- 15. A pharmaceutical composition adapted for administration as an agent for treating psoriasis, or atopic dermatitis, disease associated with pathological angiogenesis (i.e. cancer), asthma, chronic obstructive pulmonary disease, adult respiratory distress syndrome, arthritis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, gastric ulcer, septic shock, endotoxic shock, gram-negative sepsis, toxic shock syndrome, stroke, cardiac and renal reperfusion injury, glomerulo-nephritis, or thrombosis, Alzheimer's disease, graft versus host reaction, or allograft rejections comprising a therapeutically effective amount of a compound according to Claim 1 in admixture with a pharmaceutically acceptable excipient, diluent, or carrier.
  - 16. A method for preparing a compound having the Formula Ia

$$A \xrightarrow{N} R^{1}$$

$$N \xrightarrow{N} R^{10}$$
Ia

wherein A is selected from the group consisting of:

$$R^{3a}$$
 wherein  $R^{3}$ ,  $R^{3a}$ , and  $R^{3b}$  are each independently the  $R^{3b}$ 

same or different and are hydrogen, alkyl,

```
-OR<sup>4</sup> wherein R<sup>4</sup> is hydrogen,
                                            alkyl,
                                            aryl,
                                            aralkyl,
                                            acetyl, or
 5 .
                                            -(CH<sub>2</sub>)<sub>m</sub>-N-R<sup>5</sup> wherein
                                                       R<sup>5</sup> and R<sup>6</sup> are each the same or different and are
                                                       hydrogen,
10
                                                                  alkyl, acetyl, or
                                                                  R<sup>5</sup> and R<sup>6</sup> are taken together to form a 5- to
                                                                  7-membered ring optionally containing an
                                                                  oxygen atom or N-R<sup>4</sup> wherein R<sup>4</sup> is as
                                                                  defined above and m is an integer of 2 to 5,
15
                                   -(CH<sub>2</sub>)<sub>n</sub>-N-R<sup>7</sup> wherein n is zero or an integer of 1 and R<sup>7</sup> and R<sup>8</sup>
                                               R^8
                                   are each independently the same or different and are hydrogen,
                                              alkyl,
20
                                              aryl,
                                              aralkyl,
                                              acetyl, or
                                                        -(CH<sub>2</sub>)<sub>m</sub>-N-R<sup>5</sup> wherein R<sup>5</sup> and R<sup>6</sup> are as defined
25
                                                        above or R<sup>7</sup> and R<sup>8</sup> taken together to form a 5- to
                                                         7-membered ring optionally containing an oxygen
                                                         atom or N-R<sup>4</sup> wherein R<sup>4</sup> and m are as defined
                                                         above,
 30
                                   -(CH<sub>2</sub>)<sub>n</sub>-CON-R<sup>7</sup> wherein R<sup>7</sup>, R<sup>8</sup>, and n are as defined above,
                                                      R^8
```

10

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)
This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1. X Claims Nos.: 7-13 because they relate to subject matter not required to be searched by this Authority, namely:  Remark: Although claims 7-13 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.  2. Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows:
As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark on Protest  The additional search fees were accompanied by the applicant's protest.  No protest accompanied the payment of additional search fees.
